INTRODUCTION

1.1 PROJECT OVERVIEW

In order to help users successfully manage their spending, this project entails developing a personal expense tracker application. The user-friendly programme is designed to allow users to plug in their expenses and visualise them so they can keep tabs on their spending. A user may also set a spending cap, and if this cap is exceeded, the user

will receive an email notification.

1.2 PURPOSE

This project was created to assist people in managing their finances well because occasionally people struggle with saving and budgeting. This app provides the entire experience with regular email updates when the user reaches a particular limit and joint family accounts offered in the app. With the use of fantastic charts, the user can also see how they are spending their money.

LITERATURE SURVEY

| | Title of the Paper | Methodology Used | Observations | Results + Conclusions | Limitations |
|---|--|--------------------------------------|--|--|--------------------------------|
| 1 | Income and Expense Tracker | Android App | App has features like add income, add category, categories, export income, remove export files, and view expenses | The project successfully avoids the manual calculation for avoiding calculating the income and expense per month. | Only Supports Android Platform |
| 2 | Daily Expense Tracker | Android Application with Database | The project successfully avoids manual calculation which results in less human effort, saves time and number of calculation mistakes occurring is not less but zero. | The modules developed were efficient, attractive and easy to understand and easy to use. | Only Supports Android Platform |
| 3 | EXPENSE TRACKER | Mobile App using Database | a top-down approach, with the focus on what comes first, followed by how, and then on to subsequent levels of detail | application enables the user to better manage his expenses | Only Supports Android Platform |
| 4 | Expense Tracker : A Smart Approach to Track Everyday Expense | Java and MySQL Workbench based App | It will prove to be helpful for the people who are frustrated with their daily budget management, irritated because of amount of expenses and wishes to manage money and to preserve the record of their daily cost which may be useful to change their way of spending money. | Expense Tracker app is usable by anyone who are willing to manage their expenses and aiming to save for the future investments. | Difficult to export data |
| 5 | Expense Manager Application | Android Application backed by SQLite | This app has multiple features like Investment consultant, Stock Market viewer, Financial New viewer, Split Bill and Offer Zone | Developed a mobile application that Keeps track of all of your daily transactions, keeps track of your money lent or borrowed, suggests you with the most effective investment options, offers your discounts in popular categories, view exchange and to read latest authenticated financial news | Only Supports Android Platform |

Income and Expense Tracker

Features of the app include adding revenue, adding categories, exporting money, removing export files, and viewing. Although the product only supported the Android platform, it successfully avoided manual calculations for determining monthly income and expenses.

Daily Expense Tracker

The project successfully eliminates manual calculation, resulting in less human work, time savings, and absolutely no calculation errors. The modules created were effective, appealing, simple to learn, and simple to utilise.

Expense Tracker

The emphasis was on what comes first, then how, and then on to following levels of detail. This was a top-down strategy. The user of this programme can better control his costs.

Expense Tracker: A Smart Approach to Track Everyday Expense

It will be beneficial for those who are upset with managing their daily budgets, annoyed by the sheer volume of expenses, and who wish to manage their finances and keep track of their daily costs in case they need to alter their spending habits. Anyone who wants to monitor their spending and wants to save for future investments can use this app.

Expense Manager Application

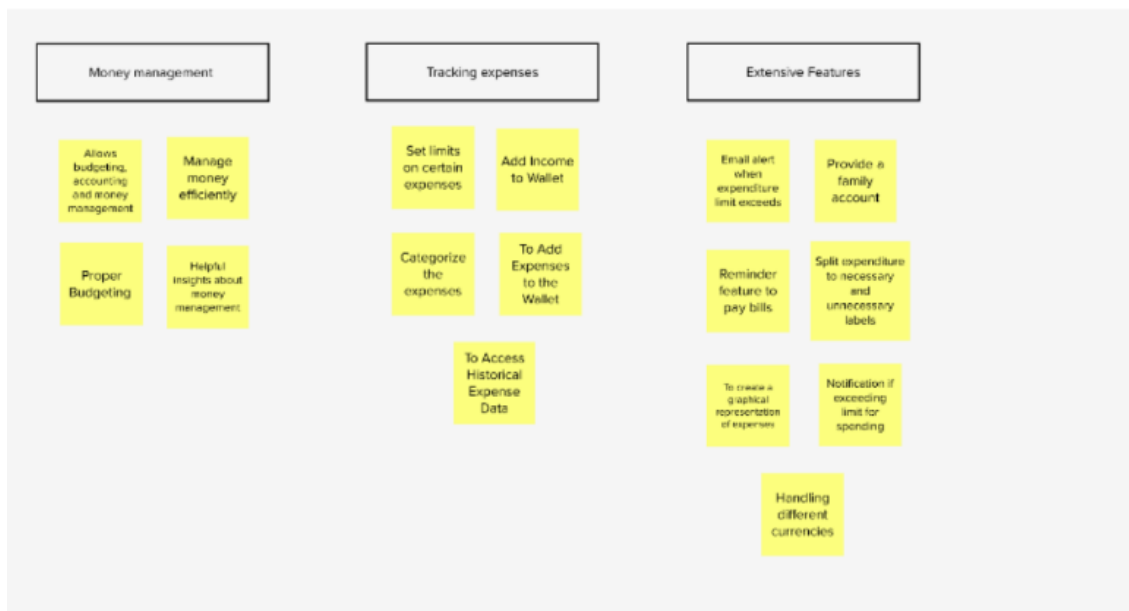

This programme contains a variety of features, including Offer Zone, Split Bill, Stock Market Viewer, and Financial News Viewer. This app was a smartphone application that kept track of all of your daily transactions, tracked any money you had lent or borrowed, offered you discounts on popular items, offered you the best investment possibilities, and allowed you to read the most recent, authenticated financial news.

IDEATION AND PROPOSED SOLUTION

3.1 EMPATHY MAP CANVAS

3.2 IDEATION AND BRAINSTORMING

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

🕒 10 minutes

TIP

You can select a sticky note and hit the pencil [switch to sketch] icon to start drawing!

Person 1

To Access Historical Expense Data

Allows budgeting, accounting and money management

Provide a family account

Email alert when expenditure limit exceeds

Person 2

To Add Expenses to the Wallet

Proper Budgeting

Handling different currencies

Split expenditure to necessary and unnecessary labels

Person 3

Add Income to Wallet

Notification if exceeding limit for spending

To create a graphical representation of expenses

Helpful insights about money management

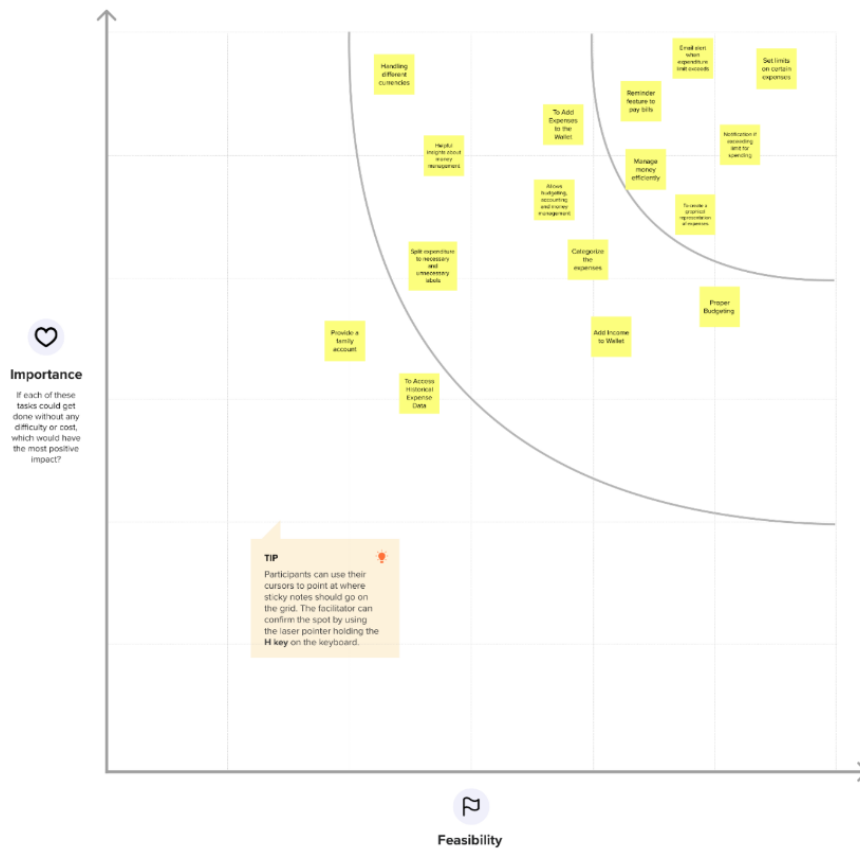

Person 4

Set limits on certain expenses

Manage money efficiently

Categorize the expenses

Reminder feature to pay bills

3.3 PROPOSED SOLUTION

| S.No. | Parameter | Description |
|-------|--|---|
| 1. | Problem Statement (Problem to be solved) | It is hard for a spendthrift employee who is trying to track his expenses and manage his finances efficiently to save money, but there is no web application available with extensive features as most of the existing ones are mobile applications and are devoid of recommendation features and prediction of unnecessary expenditure. |
| 2. | Idea / Solution description | A personal expense tracker web application which will ask users to add their expenses and based on their expenses wallet balance will be updated which will be visible to the user. Also, users can get an analysis of their expenditure in graphical forms. A notification will be sent as a mail if the budget is crossed, paving the way for efficient money management. |
| 3. | Novelty / Uniqueness | <ul style="list-style-type: none"> - Reminder feature for paying bills - AI features using IBM Watson (Chatbot) for providing recommendations on efficient money management - Family wise account for tracking expenditure - Precise analytics for prediction |
| 4. | Social Impact / Customer Satisfaction | <ul style="list-style-type: none"> - Helps people to track their expenses and cut off unnecessary spending - Helps prevent impulse purchases saving more money - Helps manage the budget but allowing the user to allocate funds for recurring expenses - Remind users to pay the recurring bills reducing penalty fees - Efficient money management paving way for adequate savings |

| | | |
|----|--------------------------------|---|
| 5. | Business Model (Revenue Model) | This application can support advertisements which can be a source of revenue for the issuers and in turn to remove the ads can make a small pricing for the customers. |
| 6. | Scalability of the Solution | This application can further be extended in terms of adding features where billing and taxations could be handled, with smart sensing of expenditure through automatic extraction of information from photographs of printed bills. |

3.4 PROBLEM SOLUTION FIT

| | | | | |
|--|--|--|---|--|
| Define CS, fit into CC | 1. CUSTOMER SEGMENT(S) Students and adults with income who want to keep track of their expenses, save to buy something or to invest. CS | 6. CUSTOMER CONSTRAINTS Spending power, budget, no cash, network connection, available devices, trust, confidentiality, sense of individuality. CC | 5. AVAILABLE SOLUTIONS Customers have turned to people for help ie hiring someone to keep track of their personal expenses and give them suitable recommendations. Hired professionals could easily communicate what needs to be done. Hiring professionals cost a lot of money and some people tend to cheat their clients. AS | Explore AS, different |
| | 2. JOBS-TO-BE-DONE / PROBLEMS Logging expenses, recommendations on expenditure, reminders and checks for needed transactions, spending limit, working in a different country or planning a trip requires currency change and limited budget. JP | 9. PROBLEM ROOT CAUSE What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations. The root cause of this problem arises from money and how others are able to live in a better fashion with the same salary. Able to spend your money effectively and being able to buy what you want is the root causes of these problems. RC | 7. BEHAVIOUR Communicate with their colleagues what kind of app they used and how useful it was and they will start using the app. They also use the Internet to get online reviews of the app and accordingly plan their. BE | |
| Focus on J&P, tap into BE, understand RC | 3. TRIGGERS Seeing our colleague being able to manage his budget efficiently through the recommendations and expenditure tracking via this application triggers others to utilize the benefits and manage money effectively too. TR | 10. YOUR SOLUTION The current solution involves having limits to expenses, adding expenses, adding income, grouping incomes, providing visualizations on how income has been spent. Our solution on top of the existing solution involves reminder feature for paying bills, building a checkbox for recommendations and precise analytics for prediction. SL | 8. CHANNELS of BEHAVIOUR 8.1 ONLINE Using the internet and many online forums like quora of how people are solving their issues relating to money expenditure. 8.2 OFFLINE Talking to your friends and family of how they solve these issues and applying them to your life. Hiring professionals who are able to give solid advice based on your problem. CH | Focus on J&P, tap into BE, understand RC |

Identify strong TR & EM

| | | |
|--|--|--|
| 4. EMOTIONS: BEFORE / AFTER Customers feel lost and indecisive and end up becoming stingy and hence cannot spend their money effectively. After using the app customers get a sense of satisfaction and becoming confident and are able to spend their money and lead happy lives. EM | | |
|--|--|--|

Requirement Analysis

4.1 Functional Requirements

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task) |
|--------|--------------------------------------|---|
| FR-1 | User Registration | Registration through Form (UI) Store in Database |
| FR-2 | User Login | Login portal Verification of username and password Error Message Display |
| FR-3 | Adding Expenses | Expenses updated through form (in dashboard) |
| FR-4 | Updating Expense Wallet | Incrementing/Decrementing balance in wallet |
| FR-5 | Graphical representation of expenses | Generating charts based on historical expense data |
| FR-6 | Email Notification | Checking of Budget exceeding limit Sending mail to user |
| FR-7 | Chatbot Services | Training IBM Watson Query processing and accessing database Appropriate response generation |

4.2 Non Functional Requirements

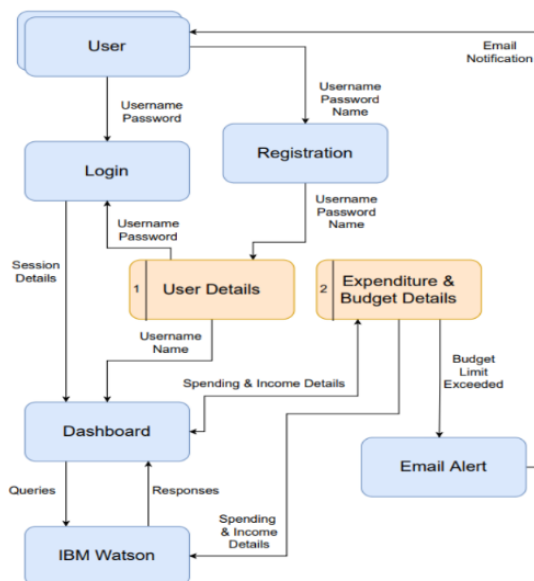

| FR No. | Non-Functional Requirement | Description |
|--------|----------------------------|---|
| NFR-1 | Usability | This product must be user-friendly by incorporating various features in the UI like navigation views, error messages being displayed if information entered is incorrect, tooltip texts provided for ease of use and accessibility features. |
| NFR-2 | Security | This product ensures data is being secured, stored in IBM DB2 with user access control features, authentication involved during registration and login, users can only access their own expense data. |
| NFR-3 | Reliability | Users can access their expense data and modify them 99 percent of the time without failure. This application is reliable as transactions and updating the expense wallet function supports atomicity and checks for irregularity or malfunction periodically. |

| | | |
|-------|---------------------|---|
| NFR-4 | Performance | This application consists of pages which must open within 2 seconds, the load time is reduced. This system responds back with accurate messages and error notifications under different load conditions. Rendering of data from the database must be faster including the concept of indexing in the database, thus keeping less response time. |
| NFR-5 | Availability | This application is expected to have low down time as it is hosted on Kubernetes, being a distributed system. It should be made available 99.9 percent of time for users to access expense data and wallets |
| NFR-6 | Scalability | This application can be scaled using horizontal scaling where more machines are added to the pool of servers to support more number of users at a particular instance of time. |

to me ▾

Hi user,
You have crossed your budget for this month. ---you have made max expenditure in so and so category! Its a reminder for you to start saving!

img

ADVANTAGES AND DISADVANTAGES

The benefits of this project include the ability for users to take advantage of the application and successfully manage their finances through reminders for various bill payments and the ability to receive alerts each time they go over their budget. Through numerous visualisation charts, the user

may also observe how they are using their money. Additionally, the Watson chatbot greatly facilitates user navigation throughout the entire programme. The absence of recommendation tools that tell users what to do with their money and how to save money to attain specific goals is one of this application's shortcomings. Additionally, neither currency nor language changing features are included

CONCLUSION

Through this project we have learnt how to plan and build a project from scratch and coordinate with our team members. Additionally, we have learnt how a project is structured in a professional manner. Our app is able to help people manage and effectively spend their money.

FUTURE SCOPE

In order for users to benefit and see what our app has to offer that will help them in attaining their goals, we plan on adding recommendation systems

to our future scope. Additionally, we hope to provide joint family accounts and introduce additional languages to the app.
